### Product Description

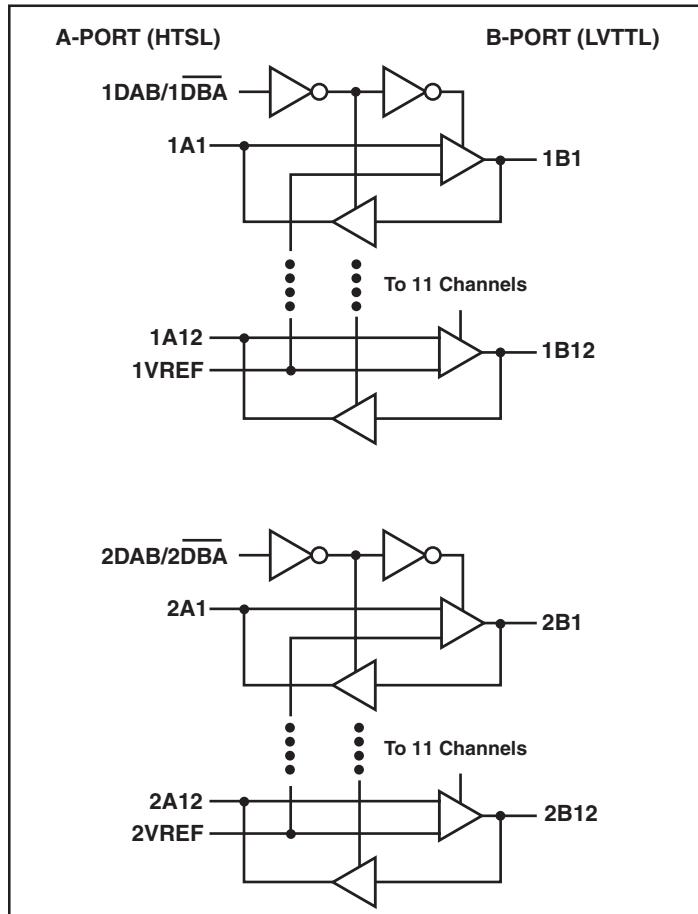

Pericom Semiconductor's PI74HSTL1212 consists of two 12-Bit bi-directional non-inverting transceivers with two separate supply rails, A-Port ( $\text{V}_{\text{CCA}}$ ) set at 1.8V, and B-Port ( $\text{V}_{\text{CCB}}$ ) set at 3.3V. Each set of 12 transceivers allows translation from a 1.8V to 3.3V and back again. The control inputs  $1\text{DAB}/\overline{1\text{DBA}}$  and  $2\text{DAB}/\overline{2\text{DBA}}$  allows independent 12-Bit slice direction control for greater flexibility.

The PI74HSTL1212 is particularly useful for asynchronous communications between HSTL and LVTTL/LVCMOS data buses.

### Truth Table (Each 12-bit slice)

H (TTL)	XA to XB HSTL to LVTTL (LVCMOS)												
L (TTL)	XB to XA, LVTTL (LVCMOS) to HSTL

### Notes:

Stresses greater than those listed under MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

1. This value is limited to 3.6V maximum.
2. This value is limited to 2.7V maximum.
3. The package thermal impedance is calculated in accordance with JESD 51.
